## Sequence 43, Application US/10158895
## Patent No. US20020155624A1
## GENERAL INFORMATION: US20020155624A1
## GENERAL INFORMATION: COLCHIRO
## PAPLICANT: ONFO, KOICHIRO
## APPLICANT: OHTOW, TOSHHIRO
## TITLE OF INVENTION: METHOD OF SCREENING TCF-BETA INHIBITORY SUBSTANCES
## TITLE OF INVENTION: MUMBER: US/09/529,279
## PRIOR PPLICATION NUMBER: US/09/529,279
## PRIOR PILING DATE: 2000-04-11
## PRIOR PILING DATE: 1998-10-22
## PRIOR PILING DATE: 1998-10-22
## PRIOR FILING DATE: 1997-10-22
## PRIOR FILING DATE: 1997-10-22
## NUMBER: PETHOR OF SEQ ID NOS: 48
## SOFTWARE: PatentIn Ver. 2.1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        1 QSPTLTLQSTNTHTQSSSSSSSGGLFRSRPAHSLPPGEDGRVEPYVDFAEFYRLWSVDHG 60

Submitted (08-DEC-1999) Sanger Centre, Hinxton, Cambridgeshire, CB10 1SA, UK. E-mail enquiries: humquery@sanger.ac.uk Clone requestes: clonerequest@sanger.ac.uk clonerequest@sanger.ac.uk clonerequest@sanger.ac.uk replaced gi:5419637.

This sequence has been finished according to sequence map criteria as follows. An attempt is made to resolve all sequencing problems, such as compressions and repeats, but not necessarily within known annotated human repeat sequence elements (e.g. Alu). Where the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   repeat_region
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 IMPORTANT: This sequence is not the entire insert of clone RP3-407F17 It may be shorter because we only sequence overlapping sections once, or longer because we arrange for a small overlap between neighbouring submissions. The true left end of clone RP3-407F17 is at 1 in this sequence. The true left end of clone RP3-104E15 is at 89561 in this sequence. The true right end of clone RP3-333H23 is at 17123 in this
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             This sequence was generated from part of bacterial clone contigs human chromosome 22, constructed by the Sanger Centre Chromosome Mapping Group. Further information can be found at http://www.sanger.ac.uk/HGP/Chr22
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 http://www.sanger.ac.uk/Projects/C_elegans/wormpep RP3-407F17 is from the library RPCI-3 constructed at the Roswell Park Cancer Institute by the group of Pieter de Jong.                                                                                                    NOTE: This is a 'working draft' sequence. It currently consists of 13 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence.
                                                       as soon as it is available and the accession number will be preserved.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Human; TAB1; XIAP; X-linked inhibitor of apoptosis protein; TGF-beta; transforming growth factor-beta activated kinase 1; monocyte migration; TAK1 binding protein 1; extracellular matrix protein production; cell growth inhibitor; beta-amyloid protein deposition; immunosuppression; Transforming growth factor-beta; ds.

Homo sapiens.

```
Homo sapiens.
 This sequence encodes the human TAB1 protein.

The invention relates to a method for screening a substance inhibiting the invention relates to a method for screening a substance inhibiting the formation of a complex between XIAP and TAB1, in which X-linked inhibitor of apoptosis protein (XIAP), transforming growth factor-beta activated Kinnse I(TAK1) binding protein I(TAB1) and a substance to be tested are contacted with each other and then the presence or formation of a complex between XIAP and TAB1 is detected. The substance can be used as a drug for extracellular matrix protein production enhancement, cell growth inhibition, monocyte migration, physiologically active substance induction, immunosuppression, and beta-amyloid protein deposition. A substance inhibiting the formation of a complex between TAB1 and XIAP as well as between XIAP and TGP-beta (Transforming growth factor-beta) type I and/or type II receptor is useful as a drug.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 1309 CAAAGCCCGACCTTAACCCTGCAGTCCACCACCACACACGCACACGCAGAGCAGGCACTCCAGC 1368

This cDNA clone codes for human TAB1 (see AAW26706), a novel member of the transforming growth factor-beta receptor signal transduction pathway, which activates TAK-1 knames activity upon binding. To obtain the full-length TAB1 coding sequence, a human kidney cDNA library was screened using as a probe a partial TAB1 cDNA obtained from a yeast two-hybrid assay for proteins that interacted with TAK1. The 5' terminus was identified by S'RACE. 2 Different clones were sequenced, with cytosine and adenine (see AAT91178) as the IBSTh nucleotide, respectively, and deposited as FERN BP-5599 and FERN BP-5509, respectively. Also claimed are: isolated DNA encoding a protein modified by a substitution, deletion and/or addition of 1 or more amino acids of the 504-residue TAB1 sequence; (3) isolated DNA encoding a protein comprising an above protein comprising a madove protein comprising a madove protein or polypeptide; (5) expression vector comprising an above DNA, and (6) host cell, preferably a mammalian or yeast cell, transformed by the expression vector comprising an above DNA, and (6) host cell, preferably a mammalian or yeast cell, transformed by the expression vector comprising an above protein or polypeptide; (5) expression sequence; (6) list expression TAB1 and TAK1 can be used to sereen for TGF-beta signalling pathway inhibitors by contacting the cells with a test compound, and measuring the TAK1 kinase activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   40

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     밁
This cDNA clone codes for human TAB1 (see AAW26707), a novel member of the transforming growth factor-beta receptor signal transduction pathway, which activates TAK-1 kinase activity upon binding. To obtain the full-length TAB1 coding sequence, a human kidney cDNA clibrary was screened using as a probe a partial TAB1 cDNA obtained from a yeast two-hybrid assay for proteins that interacted with cranscered with scale of the sequenced, with cytosine (see AAT91175) and adenine as the lesth nucleotide, respectively, and deposited as FERM BP-598 cand FERM BP-508, respectively. Also claimed are: isolated DNA encoding a protein modified by a substitution, deletion and/or addition of 1 or more amino acids of the 504-residue TAB1 sequence; (2) DNA which can hybridise with the 1560 bp nucleic acid sequence; (2) DNA which can hybridise with the 1560 bp nucleic acid sequence; (2) INA which can hybridise with the 1560 bp nucleic acid sequence; (2) INA which can hybridise with the 1560 bp nucleic acid sequence; (2) DNA encoding a protein comprising afusion comprising an above protein or polypeptide; (5) expression comprising an above DNA; and (6) host cell, preferably a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               20-NOV-1996;
